

DENTISTRY > DENTAL ISOLATION

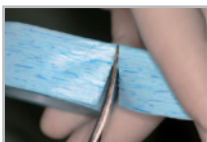

## ISOTAPE

TAPE FOR DENTAL ISOLATION

- Isolate more than 200 teeth with one roll.
- Avoid any risk of damaging adjacent teeth by keeping them isolated.
- Great economy of time and safer procedures.
- Very flexible, thin and easy to use.
- Material specially produced for dental application.

Choose the correct size to isolate one of the adjacent teeth.

cut the IsoTape section with scissors.

Isolate one tooth.

Repeat the same process for the other tooth to be isolated.

*Clinical case given by the Group of Dental Studies of Unzibari Brazil - Dental University*
